*Building Technology for
Africa and the world with -*

Summer 2011

Term Report – 2007 to 2010

150 new computers installed on 11 trips to 15 countries.

410 computers refurbished and shipped via container to 16 African, 4 Latin American and 3 Asian Countries.

We have changed/enhanced the educational process of over 50% of the Bible School students on the continent of Africa.

Our next term? Supply the rest. We have a dream to see that every Bible School student has access to computer technology to enhance their learning, draw them into the 21st century. Africa is woefully behind in technology but we believe they will catch up. We want to be part of that to help EVERY Bible School have the opportunity to learn via technology.

New Computer Lab in Madagascar

Stew is with the Principal and computer lab manager in the capital city of Madagascar. This is the first time there have been any computers available for student use. Few students had worked on computers before.

We are so very thankful to those who have stood with us prayerfully and financially. Without your support there would be a lot of Bible School students unable to utilize computers for their studies.

Computer Lab in Swaziland Upgraded

Stew is with the General Superintendent of Swaziland, the missionary associate Naomi Alldridge, Rod Eltringham and other teachers at the school. Stew shipped a computer lab here 4 years ago but thanks to generous donors we were able to upgrade the lab with 12 new computers. In a country where the published AIDS rate is 40% the church is growing and the need for trained pastors is growing as well.

Our year of iteration is now underway and we need to schedule a LOT more services in a LOT of new places in order to meet the financial goals that have been assigned to us. If Stew hasn't visited with you about scheduling a service or a meeting, please contact him at the email or phone listed below. We have a LOT to get accomplished in the next 10 months.
